Article 6 Network

LAUNCH CAMPAIGN · 2026

Together. Today. Tomorrow.

The Paris Agreement carbon market can only be built together, it is being built today, and it is the carbon market of tomorrow.

ARTICLE 6 NETWORK ASSOCIATION (IN FORMATION) · GENEVA, SWITZERLAND

article6.net

Together.

One system. One framework. One rulebook.

Article 6 is not one developer running one project in one region. It is not voluntary offsetting, and it is not a patchwork of standards that each set their own rules. It is one system, the **Paris Agreement carbon market**, built on one framework, **Article 6**, under one rulebook, the **Paris Agreement**.

NO ONE CAN ISSUE AN ARTICLE 6 CREDIT ALONE

Every unit needs the whole chain to work:

International	UNFCCC rules, the Article 6.4 Supervisory Body, registries and reporting
National	A host country that authorises the transfer and applies a corresponding adjustment, and a buyer country that accounts for it
Project	A developer, a methodology, verification and finance that meet both

Article 6 Network is where it comes together

Buyers, banks and developers need to understand this system now, and act inside it with governments. The Network is one place to learn the rules, shape them and meet the people who apply them.

SYSTEM
The Paris Agreement carbon market

1
FRAMEWORK
Article 6

1
RULEBOOK
The Paris Agreement

Today.

The market is being structured right now

The rules, registries, prices and first deals that will define Article 6 for decades are being set in this cycle. The signals are already there.

130

Countries with Article 6 Authorities, ready to develop, issue and trade

UNFCCC, SEP. 2026

1,664

Article 6 headlines since January 2025

CARBON PULSE

Companies with SBTi-validated targets: potential developers, buyers, investors

SBTI TARGET DASHBOARD

PACM live

First methodology adopted, first issuances approved

ARTICLE 6.4 MECHANISM

COP31

First large sovereign ITMO transactions expected to close

MARKET EXPECTATION

Behind these numbers are thousands of announcements: bilateral agreements between governments, authorisation frameworks, registries and market infrastructure, and sovereign buyers and sellers stepping forward. Those in the room now help decide how this market works.

Turn your FOMO into concrete action with us :) JOIN THE MARKET TODAY

Tomorrow.

The future of the global carbon market

The Paris Agreement carbon market is the world's only globally compliant carbon market, and the forward policy signals all point to it.

Aviation · CORSIA

ICAO's scheme requires units with host-country authorisation and corresponding adjustments, the Article 6 standard, for airlines' offsetting obligations.

European Union

Ministers agreed a 90% net cut by 2040, with up to around 5% of the effort from international Article 6 credits from 2036.

Singapore

Companies can use eligible international carbon credits for up to 5% of their taxable emissions, through Article 6 implementation agreements.

Sovereign buyers

Japan, Switzerland, Sweden, Norway, Korea and others buy ITMOs to meet their national climate targets.

From 0.7 Gt to 7.2 Gt a year

ARTICLE 6 CREDIT DEMAND, $GTCO_2E$ PER YEAR

Indicative trajectory, as charted by A6 Ratings: Trafigura / OIES 2030 floor; BNEF base case 2050. A market worth an estimated $180bn by 2050.

First-mover advantage. Members who join now build the market of tomorrow and gain the knowledge, the relationships and a voice in the rules before the market scales.

THE CALL

Together. Today. Tomorrow.

Build the Paris Agreement carbon market with everyone who makes it work, join while its rules and first deals are being set, and secure a first-mover position in the carbon market of the future.

CAMPAIGN LINES

TOGETHER	One system. One framework. One rulebook. One network.
TODAY	130 countries are ready. Are you?
TOMORROW	Build the future of the global carbon market with us.
